

Droopy Eyelids A Danger When Driving?

Important Facts

Several conditions can occur that make eyelids and eyebrows droop, obstructing vision. When this occurs, the minor annoyance of having saggy lids or brows becomes a medical issue that must be treated.

Safety when driving becomes questionable as your peripheral vision may be impaired.

Eyelid surgery when determined by an Ophthalmologist to be impairing your vision will most likely be covered by your insurance.

Eyelid surgery is performed as an outpatient surgery with very little discomfort and quick recovery.

Eyelid surgery can enhance your appearance and improve your vision at a fraction of the cost of plastic surgery.
